Opening - Dosing - Separating - Cleaning - Processing
Transport - Measuring - Dust Extraction - Controlling - Baling
Packaging - Checking - Feeding - Weighing - ...

Complete systems for:
- Bast fibres
- Natural fibres
- Synthetic fibres
- Mineral wool
- Hygienic products
- Paper and cardboard
- Biomass
- And many more...

Turnkey projects!
Design: in 3D-package, by our R&D Department
Production: in our manufacturing shop
Installation: by our mechanics, all over the world
Start up: by our engineers, all over the world
Service after sale
Van Dommele Engineering designs and builds complete processing lines for the traditional flax-fibre industry (Benelux & France). For the past decade we have been doing this all over the world for hemp-fibres as well. We have realised large projects in Malaysia, South Africa, England, Spain and Canada.

We also provide installations for companies such as SCA Packaging, SCA Hygiene, Knauf Insulation, etc. to remove waste from the production lines and to transport it for baling. The balers are built by one of our sister companies Valvan Baling Systems. The finished bales can then be brought completely automatically to a storeroom. Our systems can be found in the Benelux, as well as in the Czech Republic, Russia, England, France, etc.

For the past couple of years we have been offering solutions for a few large recycling companies. For them it is of paramount importance to be able to separate as much waste fractions as possible and, if necessary, to reduce them in size; something Van Dommele Engineering is perfectly able to offer.

General material transport and dust removal are also part of our activities. We build transport and weighing systems and filters for the textile and carpet industry, but also for a couple of very specific applications (such as vermiculite or aramid).

A relative new sector is biomass, where we can open, dose and clean the raw material for the eventual biomass.

We are not afraid of new challenges; hence, the description above is certainly not complete!!

Today...
Van Dommele Engineering has a team of experienced and enthusiastic engineers who design the machines. We also have a construction workplace of our own with skilled professionals for the production and assembly. Van Dommele Engineering has about 30 employees in all. The company has always been family-owned until 2000 when it was incorporated in the VALTECH group, a solid and financially strong organisation. More than 70% of production is exported.

VDE is very easy to reach! (500m from the R8 around Kortrijk)
